VC 400 640

The Communication Link

The Onity portable programmer is the clever link between your front desk and all of your secured access points. Easy to use and lightweight, this handheld allows your front desk staff to perform communication functions without interrupting check-in procedures.

The Onity portable programmer is used by your staff to test or program your locks, and to retrieve the audit trail of Onity electronic locks, card readers and electronic in-room safes.

The portable programmer is the only tool you need to run a complete diagnosis of the functioning of any Onity lock, or to open the lock in case of an emergency.

The direct connection port to the lock provides hassle free communication. Compatible with both Onity HT28 Smart, HT24w and HT22 electronic locking systems.
