- Control HVAC Setback Automatically
- Patented “5 Star” Humidity & Condensation Control
- Engineering Default Alarms
- Security Monitoring
- Additional Productivity Savings

Additional Wireless Features

- Wireless In-Room
- Wireless from Room to Front Desk or Hotel Engineering

Surpassing typical energy management systems, innPULSE® Operations Manager is an advanced in-room information system with innovative features designed specifically to reduce operations expenses, improve occupant services, and closely monitor facility occupant room information in your property. innPULSE is Windows® network compatible.

innPULSE provides a total sleeping room information and management system which benefits engineering, food and beverage, security, front office, and housekeeping operations. innPULSE® virtually manages and monitors your sleeping room

operations 24 hours a day, even when you are not there.

The innPULSE Operations Manager expands your in-room services into an interactive, on-line communication network. innPULSE directly links your electronic locks, safes, mini-bars, smoke detectors, and HVAC system with individual departments throughout the property. innPULSE provides management with on-line alarms, control functions, and operational reports.

At the heart of innPULSE is the SensorStat® DDC, a smart, programmable HVAC controller and occupancy based digital

thermostat.

Keeping your expenses down and occupants comfortable, while staying ahead of the competition is today's challenge. In addition to providing the ultimate in occupant comfort, innPULSE will help your managers reduce labor costs, control excessive energy consumption, and extend the efficiency and longevity of your furniture, fixtures, and equipment.

Now more than ever, it is easier and less expensive to reduce operating expenses, improve occupant comfort and, at the same time, increase the return on your total investment with the innPULSE Operations Manager.
